

Case Management System

Introduction

This is a system used to ensure that judicial opinions are available to the public domain.

Information

Case database

Court calendar

Why Case Management?

Public legal information is
common property and should
be accessible to all;

How it works

This is application written in PHP to demonstrate how to read and respond to USSD requests. Here is the expected workflow of the app:

Begin at STEP 1.

STEP 1:

Welcome to Case Law Service.

1. Case Search
2. Court Calender
3. Exit

If the user selects option 1, goto [STEP 2](#)

If the user selects option 2, goto [STEP 4](#)

If the user selects option 3, goto [STEP 6](#)

If the selection is none of the above, goto [STEP 9](#)

STEP 2:

Display the following menu and wait for a response:

1. Enter Case Number

If the user Enters a Case number,
goto [STEP 3](#)

If the selection is none of the
above, goto [STEP 9](#)

STEP 3:

Display the following message
and release the session:

**Case Number is 21 of 2013
parties Jones vs Republic judge
Abaleka action review date
20/03/2013**

STEP 4:

Display the following menu and wait for a response:

Enter the Cause List number

If the user Enters a number, goto [STEP 5](#)

If the selection is none of the above, goto [STEP 9](#)

STEP 5:

Display the following message
and release the session:

Thank You. **Case Number is 21
of 2013 parties Jones vs Republic
judge Abaleka action review
date 20/03/2013**

STEP 6:

Display the following message
and release the session:

Thank You

STEP 9:

Display the following message
and release the session:
 Invalid selection.

Try out the following case numbers to see how it works...So far my database only has this!!!

21 of 2013

22 of 2014

23 of 2014
